

Healthy Digestion

Digestive Enzymes - aid in absorption of essential nutrients and fatty acids. Enzymes are helpful for older pets and pets with immune disorders, poor coat, excessive shedding, skin problems, joint problems, allergies, and flatulence. PBN Digestive Blend contains enzymes necessary to aid in digestion of protein, fat, and carbohydrates.

Probiotics - have been proven beneficial in the treatment and prevention of yeast infections, bacterial diarrhea, and urinary tract infections. They help to maintain a balance of healthy bacterial flora in the stomach and intestines. Probiotics are extremely helpful during and after antibiotic treatment and are valuable on a daily basis for increasing absorption of nutrients in foods.

Amino Acids - are the building blocks of protein, and are utilized by every cell in the body for a variety of crucial functions. L-Glutamine, in particular, is widely recognized for its ability to reduce inflammation and help rebuild damaged intestinal lining. L-Glutamine supplementation may improve symptoms of gastrointestinal disorders while supporting overall health of the intestines.

Herbs - Some herbs are known to boost the immune system and aid in digestion. Ginger root calms the stomach and reduces gas, bloating, and indigestion. It also aids in absorption of nutrients. Slippery Elm is helpful for both short-term and chronic intestinal support. It soothes ulcers, stomach inflammation, and irritated intestines and actually helps promote healing of damaged intestinal membranes.

Whether you feed raw, home-cooked, or processed foods, digestive upsets can always arise. Pets By Nature offers two different products to help your pet get the most from his food. PBN Digestive Blends can be used long-term for pets with chronic gastrointestinal issues or short-term when pets are going through dietary, environmental, or emotional changes.

PBN Digestive Blend

PBN Digestive Blend contains a mixture of digestive enzymes and probiotics. These supplements work together to improve digestion and absorption of nutrients. If your pet is eating a dry or canned commercial food, the heat required to process it has destroyed most, if not all, of the naturally occurring enzymes. This means your pet's body has to make up for non-existent enzymes by using valuable stores of its own. Over time, this can lead to stress, allergies, arthritis, liver and kidney problems, and other chronic illness and disease. The enzymes and probiotics in PBN Digestive Blend help your pet digest the food, lessening the stress on his own system. PBN Digestive Blend can be of benefit in the following situations:

- ▶ Generally healthy animals who are regularly fed commercially processed foods (as opposed to natural raw foods)
- ▶ Generally healthy animals eating a combination diet of raw or homecooked and commercially processed foods
- ▶ Generally healthy animals switching from one type of diet to another (for example from processed to raw)
- ▶ Older animals on any type of diet (to supplement natural depletion of enzymes as the animal ages)
- ▶ Any animal after short- or long-term antibiotic treatment
- ▶ Any animal suffering from or recovering from a chronic illness

PBN Digestive Blend Plus+

PBN Digestive Blend Plus+ contains the same enzymes and probiotics as our Digestive Blend, as well as additional amino acids and herbs. Your pet will receive all the same benefits, along with additional support specifically for his intestine. PBN Digestive Blend Plus+ can be of benefit in the following situations:

- ▶ Animals on any type of diet who suffer from chronic gastrointestinal ailments such as IBD, IBS, or colitis
- ▶ Animals suffering from any chronic illness who display diarrhea, constipation, vomiting or other intestinal problems
- ▶ Animals regularly feed processed foods who are switching to a raw diet and are not in the best of health. This can include any conditions such as yeast infections, allergies, anal sac problems, poor coat, etc.
